

Operate a Forklift

Why Forklift?

TDTD1097B Operate a Forklift is the unit which gives you the skills and knowledge required to operate a forklift, including checking forklift condition, driving the forklift to fulfill operational requirements, monitoring site conditions and monitoring and maintaining forklift performance.

This unit allows for all participants to gain the appropriate knowledge and skills to operate a forklift safely in a work environment, handle loads of drive defensively, manage forklift controls, read instruments and adjust power to site requirements, as well as carry out pre-operational checks on a forklift, maintain workplace records and meet relevant regulatory requirements.

Operate a Forklift is becoming more in demand as many industrial organisations are more likely to take on an employee who has already participated in this unit and as a result gained their forklift license.

Please ask our consultants for details on when this course will be held.
